

2009 Parnelli - IT Staging Award Winner

Thank you valued clients, vendors, and readers of PLSN!

Designed to Help You Go Green.

Tyler Truss Systems is proud to introduce the Tyler GT[®] and our new green friendly family of products. Developed and designed by Tyler Truss Systems, the Tyler GT was formerly placed into the market as the High Utility Design or HUD[™] truss in early 2008. In less than one tour season, the Tyler GT truss is being requested for some of the largest tours in the industry.

The Tyler GT is a heavy duty truss that comes in standard 5', 8', and 10' sections, and provides complete protection for the lighting fixtures. The adjustable legs of the Tyler GT allow the truss to be stacked for transportation and storage. Legs can be either removed or relocated on the truss during your show. The center loading design of the truss allows a high density, uniform load of large format automated and conventional fixtures.

Reduced Emissions and Fuel Consumption

Higher density truck packs mean fewer trucks on the road

Eliminates Fixture Cases

Tyler GT[®] protects your fixtures without the need for cases

Saves Time

Dramatically reduces load-in and load-out time
